

Group name: Team Layosa

Members: Otelo P. Nobleza III | Shane Yvette Peñaflor | Akisha Miel Reomalis | Kristina Paula Alamil | Kyla Shaina Layosa

Course Yr. & Block: BS IS – 2b

Problem Number: 1
Problem Statement (MISSING)
GA13 - PHP/HTML/MYSQL - ORDER TRACKING - Create a PHP/HTML/MYSQL Page for your Client where the logged-in user can see their Orders, separated by the Order Status.

CODE CHANGES	INTERFACE CHANGES	Describe the functionality added or Changed
I made an order tracking page wherein the customer may see the status of what he/she ordered. The admin is the only one that can change the status of it by changing it through admin order management page.	The customer can see the status of what he/ she ordered by navigating the customer's order tracking page. By clicking "My orders" at the homepage.	When the admin changed the status of the customer's order at admin order management, the changes on the order status can be see by the customer that ordered it by navigating order tracking page of customer.

Problem Number: 2
Problem Statement (MISSING)
GA16 - PHP/HTML/MYSQL - REPORTS DASHBOARD - Create a PHP/HTML/MYSQL Page for your Admin where the logged-in Admin can see the overall status of Daily Business Summary - e.g. Sales Reports/Inventory Reports/User Activity/Item Movement Report/Top 10 Items/Sales Today vs Yesterday/Sales This Year vs Last Year.

CODE CHANGES	INTERFACE CHANGES	Describe the functionality added or Changed
REPORTS DASHBOARD: The admin can see the overall status of daily business summary.	The admin can see this year's total sales, today's total sales, and many more.	The 'this year's total sales and today's total sales will change whenever the status of the customer's order is delivered. The amount will only add up when the status is delivered.

In our projects, I was the one who made the registration page and process, login page and process, database connection, data flow diagram, homepage for admin, order page, order tracking, order management, reports dashboard, and the complete database of our project.
